EDUCATION

B.Sc. Computer Science – University of Mumbai

April 2025

CGPA: 7.8 / 10

Relevant Coursework: Cloud computing, Computer Networks, Operating Systems, Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming.

SKILLS

Languages: Python, Java, JavaScript

DevOps: Linux, Docker, CI/CD, GitHub Actions, Terraform, Git, GitHub

Web Technologies: React.js, Node.js, REST APIs

Databases: MongoDB, PostgreSQL

EXPERIENCE

Insiza Technology (Client: WNS Global Services)

Aug 2025 – Present

Desktop Support Engineer L1

- Provide L1 infrastructure and end-user support, resolving 15–20 technical incidents daily within SLA, including troubleshooting of Windows systems, applications, networking, user access, and endpoint issues.
- Support WNS-to-Capgemini technology migration, assisting with endpoint configuration, system setup, application access, user onboarding, and post-migration troubleshooting.
- Collaborate with cross-functional infrastructure and IT teams during high-severity incidents and technology transitions, participating in bridge calls for root-cause investigation and service restoration.
- Perform onsite infrastructure and meeting-room technology support, troubleshooting connectivity, hardware, AV, video conferencing, and system-related issues to maintain business continuity.

PROJECTS

SupportNook: Real-Time Collaboration Platform | [Live Demo](#) | [GitHub](#)

- **Developed** a real-time collaborative support platform with shared workspaces, Socket.IO communication, collaborative code editing, and **Judge0 API** integration for remote code execution.
- **Containerized** the application using **Docker Compose**, orchestrating **5 services** across the React frontend, Node.js/Express backend, MongoDB, Prometheus, and Grafana. Implemented **Prometheus/Grafana observability** for HTTP and Node.js runtime metrics.
- **Engineered CI/CD pipelines with GitHub Actions**, automating **18 tests**, frontend linting, production builds, and publishing **2 versioned Docker images** to GitHub Container Registry.

DocTalk AI: Real-Time AI Medical Voice Agent | [Live Demo](#) | [GitHub](#)

- Built a voice-based AI assistant that allows users to describe symptoms naturally and receive AI-generated responses in real time. Integrated AssemblyAI for speech-to-text and Clerk with Neon PostgreSQL for user authentication and secure storage of user and medical history data.
- Reduced the production Docker image by **~83% (1.81 GB → 310.6 MB)**, by implementing multi-stage builds and Next.js standalone output, while configuring the application to run as a non-root container.
- Designed and implemented a CI/CD workflow with GitHub Actions, automating application builds, Docker image builds, and publishing to GitHub Container Registry (GHCR), creating a consistent and reproducible path from source code to container delivery.
